seanfinchg@gmail.com | (714) 930-5819 | seanfinch.com | linkedin.com/in/sean-finch-g | github.com/seanfinchg

Available: May – December 2026 | Local: Boston MA | Permanent: Southern California | Open to Relocation

Education

Northeastern University, Boston MA

Candidate for a Bachelor of Science in Cybersecurity, Minor in Music

September 2023 – Present

Expected Graduation May 2027

Relevant Courses: Cyberlaw, Systems Security, Computer Systems, Network Fundamentals, Theory of Computation, Algorithms & Data, Science Technology & Public Policy, Object-Oriented Design, Programming in C++, Discrete Structures, Foundations of Cybersecurity

Activities: NU Choral Society (President), Alpha Phi Omega Co-ed Community Service Fraternity (Service Committee, Standards Chair), Cheese Club, Oasis Coding Club, Northeastern Electric Racing, CTF Club

Technical Skills

Cybersecurity: Tenable Nessus, Qualys, OpenVAS, CrowdStrike Falcon, Suricata, Zeek, Elastic SIEM Stack, Kibana, Wazuh, Wireshark, Burp Suite, Ghidra, Metasploit, MITRE ATT&CK, CIS Benchmarks, NIST Cybersecurity Framework

Technologies: Intune, Entra ID, Active Directory, Git, Tailscale, Zscaler, Linux, Proxmox, TrueNAS SCALE, Kubernetes, Docker, Nginx, Caddy, JUnit, React.js, Node.js, Express.js

Languages: Python, Java, Kotlin, TypeScript, JavaScript, HTML, CSS, Bash, Powershell, C/C++, x86 Assembly, SQL

Experience

Audax Group

IT Operations Co-op — Security Operations, Boston MA

May 2025 – April 2026

- Executed vulnerability scans with Tenable Nessus, triaged findings, and remediated vulnerabilities, reducing exposure by 40%
- Vetted requested applications by analyzing permissions, network behavior, and security posture, blocking high-risk software
- Hardened 700+ endpoints via configuration baselines in Entra ID aligned to CIS Benchmarks, boosting compliance by 35%
- Documented and delivered security architecture and automation briefings to senior leadership to support risk-informed decisions
- Automated Windows Autopilot provisioning via PowerShell and Intune Win32 applications, reducing imaging time by 20%

Northeastern University

Mechanical and Industrial Engineering IT Support, Boston MA

September 2024 – April 2025

- Administered and supported departmental endpoints, ensuring reliable performance for faculty, staff, and instructional use
- Deployed, configured, and maintained academic and engineering software, reducing downtime and user-impacting issues

CENIC

Cybersecurity Intern, La Mirada CA

May 2024 – August 2024

- Conducted ~5 DDoS analyses per week on the CalREN network, safeguarding connectivity for 20,000,000+ students and educators across 12,000 California K–20 schools including the California State University and University of California systems
- Operated Tenable Nessus and Qualys vulnerability detection systems, using Python to automate scans and cut review time 50%
- Documented security processes and gathered KPI metrics, demonstrating improvements in response times and overall posture

AFA CyberPatriot

Team Commander, Fullerton CA

January 2020 – January 2023

- Led my team to secure intentionally flawed Windows and Linux VMs by resolving vulnerabilities and enforcing access policies
- Designed and taught a cybersecurity curriculum that propelled the team to a #1 California AJROTC ranking in 2021 and 2022

Projects

Homelab Infrastructure | [Diagrams](#) | *TrueNAS SCALE, RAIDZ1, Proxmox, Kubernetes, Docker, Nginx*

- Built controlled CTF labs for adversary emulation with Metasploit, Burp Suite, and Wireshark to test alerts and security controls
- Monitored live and simulated network traffic using Suricata and Zeek, inspecting flows, port scans, and brute-force attempts
- Deployed Wazuh across multiple endpoints to centralize logs, monitor activity, and tune alerts while hardening a live environment
- Performed continuous vulnerability scanning with OpenVAS across 10+ self-hosted services and endpoints, while hardening remote access with Nginx reverse proxy, Tailscale, and Pi-hole to enforce security and monitor DNS/web traffic

Storefront Website | [GitHub](#) | [Website](#) | *React.js, TypeScript*

- Built a responsive website showcasing baked goods with a checkout system for seamless purchases

Interests

Automotive engineering, mountain biking, backpacking, street photography, strategy video games, choral singing, Romanian culture
